

Corda® CenterView™ delivers greater control of your organization's performance with its powerful dashboard technology. With CenterView, not only can you visualize your data in the most meaningful way, but you can also quickly take action because CenterView displays real-time (or right time) data and alerts you about the key performance indicators (KPIs) you choose.

Corda's patented Datafunnel™ rapidly connects to virtually any data source. You can pull your data from Oracle, SAP BW and other OLAP cubes, Microsoft SQL Server, DB2, Sybase, system files, HTML tables, web services, or spreadsheets and display it all in the same chart for easy comparison and meaningful information.

Some of **CenterView's** other key benefits for your organization include the following:

- Unlimited drill-down so you can gain insight into the root causes behind a certain metric
- Easy customization so you can see the data in a format that makes sense to you
- Compatibility with existing security and authentication protocols so each decision maker sees KPIs that pertain to his or her role in the company
- Rapid, cost-effective deployment—get your dashboard up and running in just a few days or weeks
- Access to your information anytime, anywhere—you can view CenterView using any computer or mobile device with Internet access and a browser

The new features in **CenterView 4** give you even more security and flexibility:

- The new Corda Mobile enhances the CenterView experience for mobile users, makes it easier to deploy dashboards to mobile devices, and supports new devices—including the iPhone.
- The enhanced Business Objects connector connects report data to a CenterView dashboard, even when the report is pulled from multiple queries.
- The Salesforce.com (SFDC) connector lets you connect SFDC to your dashboard without having to build your own connector.
- Per-user licensing is now available, so that you can assign priority to users and ensure that those users who most need access to data will always have it.

Product Features

CenterView 4 is a powerful enterprise platform that can connect to virtually any data source and be viewed on any computer or device that has a web browser, including mobile devices:

- Lets you visualize leading/lagging, progress against goals, deviations, exceptions, trending, part-to-whole, geographic/spatial performance, rankings, time series, correlations, distributions, and more
- Produces KPI alerts so decision makers can take quick action
- Includes a powerful, easy-to-learn design interface for rapid development and deployment with unlimited power to customize the UI
- Uses Flash or standard image formats to visualize KPIs, dashboards, and scorecards, making information available anywhere to anyone with a browser
- Simplifies dashboard delivery to mobile clients through Corda Mobile and supports multiple mobile devices, including the iPhone

Advanced Corda Mobile technology keeps you alerted anywhere and provides true decision-making power in or out of the office.

- Enables rapid connection to data through Corda's patented Datafunnel technology
- Maps data from virtually any source including Oracle, SAP BW and other OLAP cubes, Microsoft SQL Server, DB2, Sybase, system files, HTML tables, web services, and spreadsheets
- Includes a built-in Salesforce.com connector to give you easy access to external data without having to create expensive custom solutions
- Lets Business Objects users pull multiple-query reports directly into a CenterView dashboard
- Gives you access to unlimited drill-downs and increasingly detailed views, including other charts, graphs, gauges, data tables, or even other online applications
- Provides integrated maps—world, continent, country, province, state, county, zip code, congressional district, custom regions, latitude/longitude and more
- Supports role-based views and security access that integrates with existing security policies and systems, such as LDAP and Active Directory
- Ensures that high-priority users can always access data through named user licensing
- Encrypts sensitive data and settings and communicates over secure protocols
- Supports industry standards such as J2EE, XML, JDBC, ODBC, JAVA, LDAP, XMLA and others
- Integrates into application server environments including: Tomcat, WebSphere, WebLogic, WebObjects, Oracle AS, and others
- Prints clean reports with output in PDF and EPS
