

CORDA® POPCHART® 7

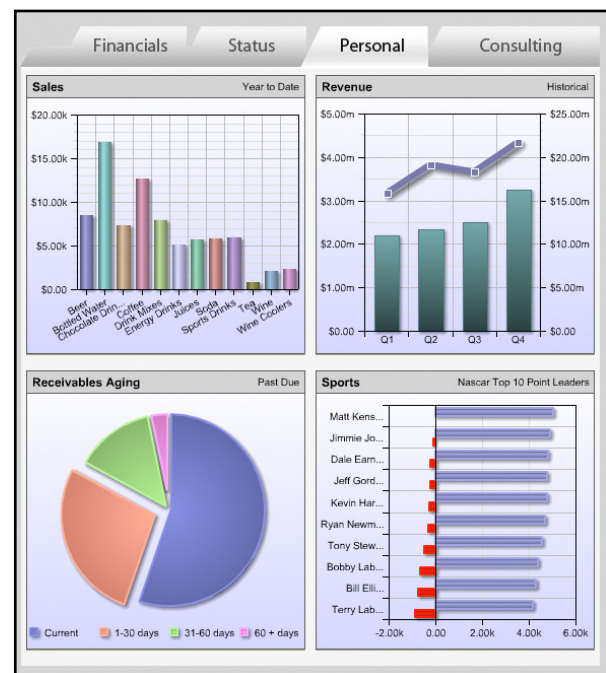

Corporate decision-makers need a windshield not a rear-view mirror. They need answers, not row after row of spreadsheet data. Supply instant insight with real-time, interactive charts, gauges and graphs. With **PopChart**, corporate decision-makers gain agility and a competitive edge in today's economy.

PopChart is the premier solution for server-based charting and graphing. PopChart is a highly scalable data visualization solution designed to securely deploy interactive charts and graphs to high-demand enterprise Websites for analysis and decision support.

With unlimited levels of drill-down, users start with a global view, then easily navigate through the data to locate the specific information needed. It's like being able to see the forest AND the trees at the same time.

PopChart's comprehensive charting and graphing solutions give IT staff and data consumers the ability to choose the tools and services that best fit their organization's data sharing, development, deployment, and hosting needs.

PopChart automatically generates descriptive text, creating charts, graphs and gauges that are compliant with Section 508 of the Federal Rehabilitation Act to provide equal access to visually-impaired web users.

PopChart is the most robust and versatile high-performance data visualization and charting system on the market today. PopChart is written in 100% Java, allowing it to run on any platform. No matter what environment you operate in, you can take advantage of PopChart's patented DataFunnel technology that creates real-time, simultaneous connections of any and all data sources, allowing users to deploy interactive, data-driven graphics for instant understanding.

Product Features

PopChart has all of the elements to quickly produce compelling charts, graphs and gauges. It is capable of delivering huge volumes of visually-sophisticated, interactive views from any data source and Web application server to any browser.

- 100% JAVA, runs on any platform
- Connects to virtually any data source, from databases to spreadsheets
- Up-to-the-minute intelligence - if the data changes, the graphic changes
- FLASH animation
- Works with virtually any web application server
- Web services ready with XML
- SSL technology for security
- Different interfaces for ease of use
- High volume scalability for the most demanding requirements
- Output in PDF and EPS for clean, crisp printed reports
- Object Inspector design tools vs. clumsy Wizard design templates
- Over 35 different graph types with hundreds of variations to serve any graphing need
- New and improved gauges
- Create customized gauges using any shapes. If you can imagine it, you can build it.
- Gallery allows users to save and share customized graphs, charts and gauges
- Chart pattern fill for use in black and white printing
- 508 compliant charts and graphs
- No proprietary browser plug-in required
- Clustering support for high-demand environments and optimum uptime
- Flash, PDF, EPS, JPEG, TIFF, WBMP, and PNG images for compelling displays
- Data-driven dynamic shapes that can be used as building blocks for many chart and graph types
