Advanced Data Visualisation

A picture paints a 1000 words

With visualizations, the brain can store an entire object made up of many properties as a single chunk of memory... **so complex data become easy to grasp**

Web-based visualizations enable **user interaction**, allowing further data intimacy.

CenterView is a powerful platform

Data and Platform Independent

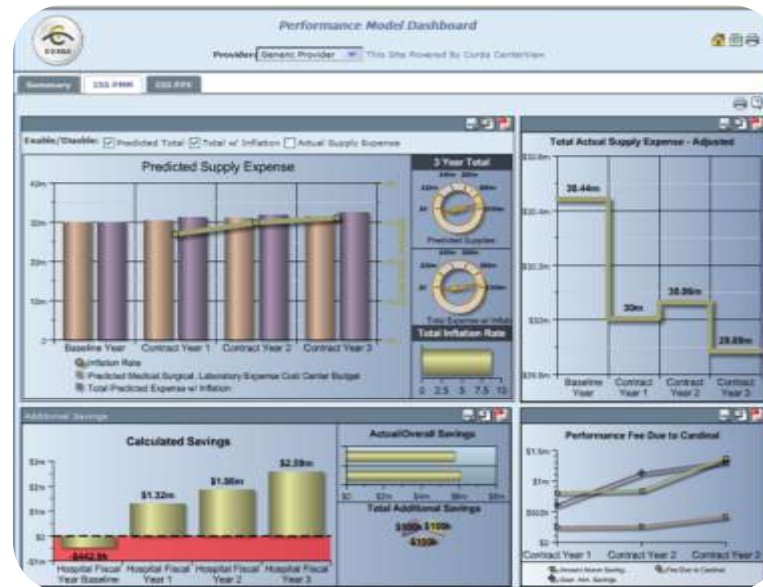

Connect to any data source. Dashboards are viewed on any computer or device that has a web browser, including mobile devices.

Rapid Development

Developing and deploying a dashboard is fast and easy with CenterView's wizards, drag and drop builder, smart themes and our intuitive design interface.

Infinite Flexibility

Create designs that fit the data and your needs. If you can imagine it, you can create it with CenterView.

Stunning Look and Feel

CenterView uses Ajax technology, delivering powerful visualizations, fast deployment and crisp data delivery at the right time.

Unlimited Drill-downs

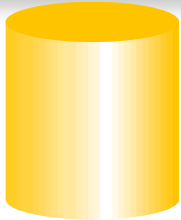

Start at 10,000 feet with a high-level dashboard view and quickly drill down as deeply as needed to see the root causes behind the data.

Secure, Role-based Access

Viewers see only the dashboards you want them to see. CenterView supports single-sign on and integration with your user authentication system.

Data from any source

Private Web

Data and platform Independence

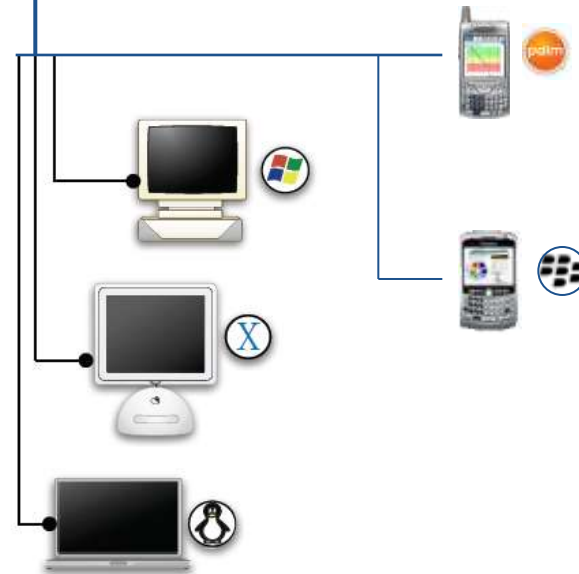

CenterView Server

- Written in Java
- Windows, Linux, Unix, or Mac servers
- Output in XML
- Minimal hardware requirements

CenterView Dashboards

- Any Browser
- Windows, Linux, Unix, Handheld, or Mac
- Secure access
- Automatic updates

Unlimited drilldowns

- Start with summarized information
- Drill down into different dimensions or more detail

Corda Mobile Server

Enhances the CenterView experience for mobile users

Makes creating and deploying KPIs to mobile devices fast and easy

Supports new devices, including the Apple iPhone and iPod Touch

Corda Mobile is now available on the iTunes App Store!

Application connectors

Salesforce.com connector lets you connect SFDC to your dashboard without having to build your own connector.

Improved Business Objects connector connects report data to a CenterView dashboard, even when the report is pulled from multiple queries.
